little attention has been paid to the history of the influence of the social sciences upon medical thinking and practice in the twentieth century the essays in this volume explore the consequences of the interaction between medicine and social science by evaluating its significance for the moral and aterial role of medicine in modern societies some of the essays examine the ideas of both clinicians and social scientists who believed that highly technologized medicine could be made more humanistic by understanding the social relations of health and illness other authors interrogate the critical assault which social science has made upon medicine as a system of knowledge organisation and power the volume discusses therefore the relationship between social scientific knowledge both in and of medicine in the twentieth century collectively the essays illustrate that the respective power of biology and culture in determining human behaviour and social transition continues to be an unresolved paradox

the extensively updated and revised third edition of the bestselling social medicine reader provides a survey of the challenging issues facing today s health care providers patients and caregivers with writings by scholars in medicine the social sciences and the humanities

plos medicine s october 2006 issue contained a special collection of eleven magazine articles and five research papers devoted entirely too social medicine the collection featured many of the leaders in the field including paul farmer arthur kleinman david satcher nancy scheper hughes dorothy porter and leon eisenberg the kaiser family foundation has conducted interviews with two of the authors of papers in this collection david satcher and paul farmer in its launch issue in october 2004 plos medicine signaled a strong interest in creating a journal that went beyond a biological view of health to incorporate socioeconomic ethical and cultural dimensions for example that first issue contained a policy paper on how the health community should respond to violent

political conflict a debate on whether health workers should screen all women for domestic violence and a study on the global distribution of risk factors for disease two years on our october 2006 issue takes our interest even further it contains a special collection of ten magazine articles and five research papers devoted entirely to social medicine we are delighted that the collection features many of the leaders in the field including the renowned medical anthropologists paul farmer and arthur kleinman the former united states surgeon general david satcher and the harvard professor of social medicine and psychiatry leon eisenberg most of our readers have welcomed our inclusive view of what a medical journal should highlight some however have been critical suggesting that we should publish less soft stuff and more hard science these critics might argue that in this era of stem cell research and the human genome project of molecular medicine and dna microarray technology the notion of social medicine seems irrelevant and outmoded but the ultimate role of a medical journal is surely to contribute to health improvement and that means looking not just at molecules but at the social structures that contribute to illness the stark fact is that most disease on the planet is attributable to the social conditions in which people live and work the socially disadvantaged have less access to health services and get sicker and die earlier than the privileged despite impressive technological advances in medicine global health inequalities are worsening
